

## New Academy – South of the City

We are now over 4 months into the main project works and the works in general have progressed very well with no incidents to report and the good dry weather we have had through the summer and early autumn periods have aided in maintaining momentum on site. You can see from the aerial picture inset that the main school, pitches and access roads platforms are now formed and foundation works are now complete on the main teaching block.

During the last couple of months we have also had a visit from Local Councillors and Community Councillors ( Pic Inset ) along with the Senior management team from Aberdeen City Council, who have all taken a tour of the new school site to see and appreciate the size and scale of the project and how it integrates into the developed site.

Over the next couple of months the main foundations and drainage infrastructure will be completed across the site and the main block superstructure steel frame will commence at the start of december, so the view and perspective across the site will certainly change rapidly over the next coming months.

## Plan of New School Layout

### Contact Personnel for the Project

<b>Martin MacLennan</b>	<b>Project Lead</b>
<b>Atholl McKay</b>	<b>Snr Project Manager</b>
<b>Peter Dunlop</b>	<b>Site Manager</b>
<b>Sandra Sangster</b>	<b>Administrator</b>
